## WORK EXPERIENCE

**Software Developer | Iris Software Inc. (Lenovo Contract) | Remote (Ashburn, VA, USA)** Aug 2025 - Present

- Enhanced Motorola's global backend **Java** apps at Lenovo, boosting efficiency and reducing service-center defects by 60%.
- Built cloud-native microservices leveraging **Java Spring Boot** and **AWS S3/EC2**, improving scalability and cost efficiency.
- Designed login anomaly detection to prevent breaches and **AI** features for streamlining day-to-day business operations.

**Software Developer | Lenovo | Full-Time | Morrisville, NC, USA** Aug 2024 - Aug 2025

- Maintained and enhanced **C#** and **Javascript** services within **Microsoft Dynamics 365**, improving API latency by 25%.
- Implemented GDPR-compliant measures to secure customer data and restricting U.S. sensitive data access internationally.
- Leveraged **Microsoft Azure** to detect exceptions, resolve bugs, and optimized data archiving for significant cost savings.

**Software Engineer | One Community, Inc. | Non-Profit, Remote, USA** June 2024 - Aug 2024

- Designed a **MERN**-based analytics system to track employee productivity, enhancing workforce insights accuracy by 35%.
- Engineered and automated GitLab **CI/CD** pipelines, reducing deployment overhead and enabling real-time monitoring.

**Intern | National Center for Supercomputing Applications | Champaign, IL, USA** May 2023 - July 2023

- Developed a **Python**-based program to query distributed log files on multiple machines in parallel using **AWS EC2**.
- Implemented caching mechanisms to store and reuse query results, reducing redundant queries and improving overall query speed by 60% by leveraging **AWS S3**.
- Utilized **React** and **Redux** to build dynamic and responsive user interfaces, improving user engagement and experience.
- Incorporated **OAuth2.0** and **JWT**-based authentication, allowing users to securely sign in via Google and Facebook.

**Programmer Analyst (Software Engineer) | Cognizant Technology Solutions | Pune, India** August 2020 - May 2022

- Engineered **Java** applications for financial institutions using **Temenos Transact** core banking software using **Agile SDLC**.
- Integrated **RESTful APIs** to support dynamic front-end functionalities and successfully resolved critical bugs in the codebase.
- Led development of an agricultural insurance website using **Java Spring Framework**, reducing customer complaints by 30%.

## EDUCATION

**University of Illinois Urbana-Champaign (UIUC)** August 2022 - December 2023

- Masters in Computer Science **GPA: 3.54**

**Jaypee University of Engineering and Technology** July 2016 - June 2020

- Bachelor of Technology in Computer Science & Engineering **GPA: 3.67**

## TECHNICAL SKILLS

|                                          |                                                             |
|------------------------------------------|-------------------------------------------------------------|
| <b>Programming Languages:</b>            | Java, C#, Python, C, HTML, CSS, SQL, JavaScript             |
| <b>Frameworks:</b>                       | React, NodeJS, ExpressJS, Rest API, Spring Boot, MVC, JUnit |
| <b>Distributed Systems &amp; DevOps:</b> | Docker, Git, GitLab, CI/CD, AWS, Azure                      |
| <b>Databases &amp; Big Data:</b>         | Oracle, MySQL, MongoDB, Apache Kafka, Apache Spark          |

## RESEARCH PUBLICATION

[Attention Mechanism for Recurrent Neural Network-based French-English Machine Translation \(Springer, 2020\)](#)

## TECHNICAL PROJECTS

**SocialNetwork | React, NodeJS, Express, MongoDB** [GitHub](#)

- Developed a prototype of the Facebook website, a social media platform using **React**, **Redux**, **NodeJS**, and **ExpressJS**.
- Implemented **JWT** token-based authentication for secure user login and registration, providing data protection.

**Recommendation System | Python, Apache Kafka, Apache Spark, Docker** [GitHub](#)

- Constructed an advanced recommendation system using **Neural Collaborative Filtering** on the MovieLens dataset.
- Deployed **Docker** containers for a distributed environment, using **Kafka** and **Spark** to handle real-time data streams.
